

Hold Cleaning machines for Bulk Carriers

Scanjet tank cleaning equipment

Scanjet provides different solutions for the cleaning of holds onboard bulkcarries. The advantages are as follows:

For bulk carriers frequently changing from one cargo to another, hold cleaning is an economical and rapid way to make the holds clean and ready for next cargo.

Scanjet hold cleaning machines assist in keeping the holds in good condition thus preventing early corrosion attacks. The machine is retractable so while loading cargo, the nozzle is protected in the pipe installed under deck. It can either be fixed installed or delivered in portable versions.

Just send us the plan or the hold layout of your vessel and we shall work out a professional installation proposal.

- Allows cleaning with closed hatches
- More frequent and economical cleaning due to shorter cleaning periods
- Cleaning operations is controlled from deck, no manpower needed in the tank
- Improved corrosion protection
- Improved safety
